

## Type of documentation for development support

In our software project, a website, it became clear the fundamental importance of the documentation as a north, the magnitude to give a workflow in a project complex and that comes across with many responsibilities it's just an obligation.

In our research we found many and many ways to document the development of the software. Our choice of XML and HTML came essentially by these factors: the facility and pragmatism of a web page development, and the simple way that we can store and transfer data.

As 2 of the examples of its usage we choose:

```
<CATALOG>
<CLOTHES>
<TITLE>CAMISETA AZUL</TITLE>
<COUNTRY>USA</COUNTRY>
<COMPANY>ZARA</COMPANY>
<PRICE>30.99</PRICE>
</CLOTHES> <CLOTHES>
<TITLE>VESTIDO VERMELHO</TITLE>
<COUNTRY>UK</COUNTRY>
<COMPANY>LACOSTE</COMPANY>
<PRICE>50.99</PRICE>
</CLOTHES>
```

```
<CLOTHES>
<TITLE>CALÇA JEANS</TITLE>
<COUNTRY>USA</COUNTRY>
<COMPANY>ADIDAS</COMPANY>
<PRICE>29.99</PRICE>
</CLOTHES>
</CATALOG>
```

(First example its usage in a catalogue page)

```
<?xml version = "1.0" encoding = "UTF-8" standalone = "yes" ?>
```

```
<!DOCTYPE address [  
  <!ELEMENT address (name,company,phone)>  
  <!ELEMENT name (#PCDATA)>  
  <!ELEMENT company (#PCDATA)>  
  <!ELEMENT phone (#PCDATA)>  
<address>  
  <name>Tanmay Patil</name>  
  <company>MODA FEMININA</company>  
  <phone>(062) 123-4567</phone>  
</address>
```

(Second Example its usage in a reference page)
